

## **Setting Rows Procedure**

- 1) Ensure you're in the correct category for the bikes you're placing
- 2) Check the row labels within the category to make sure you're in the correct row (usually boy/girl split)
- 3) Bikes alternate nose to tail within the row
- 4) Kickstands should be up, not down
- 5) It helps if outside pedal is directly up (not level with the floor)
- 6) Place the bike leaning on the already placed bike, trying to keep it as vertical as possible (not leaning)
- 7) Ensure that you're not creeping your row into the other rows or into the aisle
